

CineFlow

Cinematic Discovery & Digital Premiere

A premium web application bridging theatrical booking and digital rentals.

Ashwath P (24MIS1104) | Hemanth S (24MIS1071)

The Entertainment Gap

- ✦ Cluttered Ecosystem: Traditional movie booking sites are often visually chaotic and outdated.
- ✦ Missing Link: There is a distinct lack of a unified "Digital Premiere" alternative for premium home viewing.
- ✦ **The Vision:** A seamless, glassmorphic web app that merges the excitement of theater booking with the convenience of digital rentals.

Under the Hood: Architecture

- ✦ **Frontend:** Vanilla CSS (Flexbox/Grid, Glassmorphism, Red/Black/Surface palette) and ES6 JS (Real-time updates, Local Storage, Trailer Modals).
- ✦ **Backend:** PHP 8.x with an MVC-inspired logic structure (`includes/` , `api/` , `pages/`). PDO for secure database interactions.
- ✦ **Database:** MySQL relational schema hosted via XAMPP. Prepared statements to prevent SQL Injection.

Fortified Access Control

- ✦ **Secure Auth:** Industry-standard password hashing using PHP's `password_hash()`.
- ✦ **SMTP OTP System:** Powered by Brevo/Gmail via `mail_helper.php`. A 6-digit OTP is required for account verification and secure login.
- ✦ **Recovery Flow:** Full tokenized "Forgot Password" sequence to strictly validate user identity before granting access.
- ✦ **Workflow:** Request → Token Gen → SMTP Dispatch → Verification

Intelligent Search

- ✦ **Global Search:** Deep catalog discovery utilizing `SQL LIKE '%search%'` operators.
- ✦ **Smart Context:** Automatic query mapping dynamically adjusts filters (e.g., enforcing `is_rentable = 1` when browsing the rentals page).
- ✦ **Unified Logic:** Multi-criteria filtering (Genre, Format, Search Term) handled efficiently through a single, robust `getAllMovies()` PHP method.

Deterministic Occupancy Simulation

- ✦ **Dynamic Showtimes:** Showtime schedules and theater availability are pulled dynamically from the backend `shows` table.
- ✦ **Simulation Logic:** Utilizes a deterministic seed (`mt_srand(show_id)`) to statically simulate 30-70% capacity, automatically generating authentic "Fast Filling" urgency badges.
- ✦ **Constraint Engine:** Booking logic rigorously prevents users from selecting algorithmically reserved seats.

CineFlow Premiere

- ✦ **Digital Ownership:** A premium secondary marketplace for digital rentals at a ₹199 price point.
- ✦ **Data Tracking:** The `movie_rentals` table meticulously monitors purchase timestamps and enforces a strict 48-hour expiration window.
- ✦ **Access Control:** Gateway validation ensures only active, paid renters can initiate the media player via `watch.php`.
- ✦ **Streamlined simulated checkout with instant entitlement validation.**

High-Fidelity Playback

- ♦ **The Cinema Player (`watch.php`):** HTML5 video player meticulously optimized for high-bitrate .mp4 streaming and buffering.
- ♦ **Dynamic Mapping:** PHP securely routes Movie IDs to protected, non-public video assets (e.g., ID 6 → `Batman.mp4`).
- ♦ **Interactivity:** Immersive custom UI overlays for play/pause mechanics and integrated keyboard shortcut support (Spacebar integration).

Data Ecosystem

- ✦ **users** : Profiles, hashed passwords, verification.
- ✦ **movies** : Central catalog (Title, Trailers, Price).
- ✦ **shows** : Links movies to theaters, dates, times.
- ✦ **theaters** : Venue details and seat layouts.
- ✦ **bookings** : Theatrical ticket transactions.
- ✦ **movie_rentals** : Digital purchases and expiration.

Ready for Scale

- ✦ Database structured and indexed for high-volume transactions.
- ✦ Minimalist CSS/JS ensures lightning-fast load times globally.
- ✦ Built with modern web security and premium UX at its core.

Let's run the live demo. Search: Batman → Watch Now.
